

Eric Lin

New York, NY | 917-293-0169 | el4111@rit.edu | [linkedin.com/in/ericl04](https://www.linkedin.com/in/ericl04)

EDUCATION

Rochester Institute of Technology

August 2022 - December 2026

Bachelor of Science in Mechanical Engineering, GPA: 3.14/4.00

Rochester, NY

Coursework: Dynamics, Thermodynamics, Fluid Mechanics, Material Science, Strength of Materials, Heat Transfer

TECHNICAL SKILLS

Engineering Software: SolidWorks, AutoCAD, ANSYS, LabVIEW, LTspice, Fusion, Revit, AutoPIPE, Blender, Plant 3D

Programming & Controls: Arduino (C/C++), MATLAB

Manufacturing & Prototyping: Manual lathe and mill, drill press, welding, 3D printing, hand and power tools

WORK EXPERIENCE

RMF Engineering

September 2025 - December 2025

Mechanical Engineer Intern

York, PA

- Improved design accuracy and coordination with project engineers by building detailed Revit models of piping for vaults and tunnels
- Enhanced system documentation and design workflow clarity by producing clear P&IDs in AutoCAD Plant 3D
- Improved design safety and reliability by performing pipe stress analyses in Bentley AutoPIPE and optimizing layouts to meet allowable limits

Encore Fashion Group

June 2024 - August 2024

Summer Intern

Brooklyn, NY

- Kept jewelry inventory organized across nested bins and sub-bins by building a tracking sheet that let staff check off sorting and labeling progress in real time
- Cut new-hire ramp-up time on inventory workflows by onboarding peers directly, using a similar age/skill level to explain pain points more clearly than management could

Rochester Institute of Technology

August 2022 - Present

Dishroom/Catering

Rochester, NY

- Improved kitchen workflow efficiency and upheld hygiene standards by reorganizing and maintaining equipment across a high-volume dining operation
- Maintained team efficiency during peak service by mentoring new recruits in a fast-paced, high-pressure kitchen

PROJECTS

The Watering Hole | CAD

- Developed detailed CAD models for structural and fluid subsystems by designing and iterating a flash-chill beverage dispensing system in Autodesk Fusion
- Defined system architecture and guided design decisions through system-level functional decomposition
- Shaped iterative engineering revisions by communicating with client stakeholders and incorporating their feedback
- Met flow performance, load capacity, and durability requirements by researching and selecting mechanical components

Chime Machine | Arduino, CAD, & 3D Printing

- Improved motor movement efficiency by 50% by conceptualizing effective timing solutions for solenoid and motor operations in Arduino programming
- Informed design decisions by generating comprehensive 3D models in Onshape to explore design pros and cons

Piston | Machining & CAD

- Achieved full dimensional accuracy and GD&T compliance by designing a piston assembly model in Onshape to engineering drawing standards
- Validated the CAD design's tolerances and fit by machining components on a manual lathe and mill
